

ORAL HEALTH VALUE-BASED CARE

The medical field has been going through care delivery and payment reform for the last several years to help reduce costs and improve patient outcomes, and has moved towards a value-based care reimbursement model. Dentistry is starting to follow suit by emphasizing prevention-focused oral health care and reimbursement methodologies that incentivize providers for keeping patients healthy.

TRADITIONAL DENTAL CARE

A fee-for-service payment model that incentivizes high cost, complex procedures and focuses on volume; the more you do, the more you get paid

REIMBURSEMENT

Treating dental disease after it occurs

CARE: PREVENTION VS TREATMENT

Dentistry as a siloed profession; limited interaction with other healthcare disciplines

INTERPROFESSIONAL PRACTICE

Electronic dental records used to store information and meet billing needs

DATA MEASUREMENT

All patients receive the same care, regardless of need, which can lead to a waste of resources

HEALTH EQUITY

ORAL HEALTH VALUE-BASED CARE

Providers are paid to care for a population, with incentives for demonstrating value through preventing dental disease and keeping patients healthy

Revolutionary preventistry: prevention-focused and minimally invasive oral health care

Incentives for medical-dental integration including referrals between primary care, dental providers and other healthcare specialists

Electronic health records focused on linking quality to care by tracking outcomes, patient experience, and monitoring provider performance

Patients receive person-centered, risk-based care, following different care pathways that correspond to their need, and ensure an appropriate distribution of resources
